

Free-Access Gestation Stalls for Sows

Free-Access Gestation Stalls for Sows

For progressive producers who want to take their sow management to a higher level, PigTek offers free-access gestation stalls. This choice housing for sows is German-engineered and designed to offer producers new solutions to today's pig production challenges.

Product Features and Advantages

- Free-access stalls allow sows to exercise and stay in good condition by freely walking in and out of individual stalls.
- Animal-friendly gestation stall features an advanced, quietly operating self-catch system that helps to reduce animal stress.
- In free-access mode, when sows enter the stall, the door automatically closes behind them to provide privacy for eating. Sows release themselves by simply backing up to trigger the release latch. The door then opens automatically.
- Sows can be temporarily locked into the stalls to aid breeding and pregnancy scanning and are able to be released individually or by groups.
- Each stall includes an integrated drop feeding system.
- Feeding trough features solid steel partitions to help reduce sow competition when eating.
- The front of the gestation stall is angled to discourage sows from stepping into the feed trough.
- The back of the stall is angled to save space.
- Stalls are available in galvanized steel for durability and low maintenance.
- System can be retrofitted to existing production facilities.
- Proven design is backed by over 20 years of experience in European pig production.

Farrowing Stalls for Sows

For progressive producers who want to take their sow management to a higher level, PigTek offers unique farrowing stalls. This choice housing for sows is German-engineered and designed to offer producers new solutions to today's pig production challenges.

Product Features and Advantages

- Animal-friendly stalls help to reduce stress for sows and baby pigs.
- Farrowing stall design also helps to provide baby pigs with more space and easy sow access for nursing.
- Specially-shaped finger bars at the side of the stall help to protect and preserve baby pigs.
- Farrowing stall is designed to make it easy for sows to enter and leave.
- System can be used for conventional or diagonal stall configurations. Diagonal systems offer up to 27% more stalls per fixed space and higher space utility for sows and their litters.
- Systems can also be used to retrofit existing sow farrowing facilities with gains of up to 20% more farrowing stalls per building.
- Stall design makes it easy to reach and care for sows.
- Stalls feature eight adjustments in length and four adjustments in width for sow comfort.
- Feed trough is made of easy-to-clean stainless steel.
- Stalls are available in galvanized or stainless steel for durability and low maintenance.
- Design is proven with over 20 years of experience in Europe.
