

F-CENTRAL FARMMANAGER™

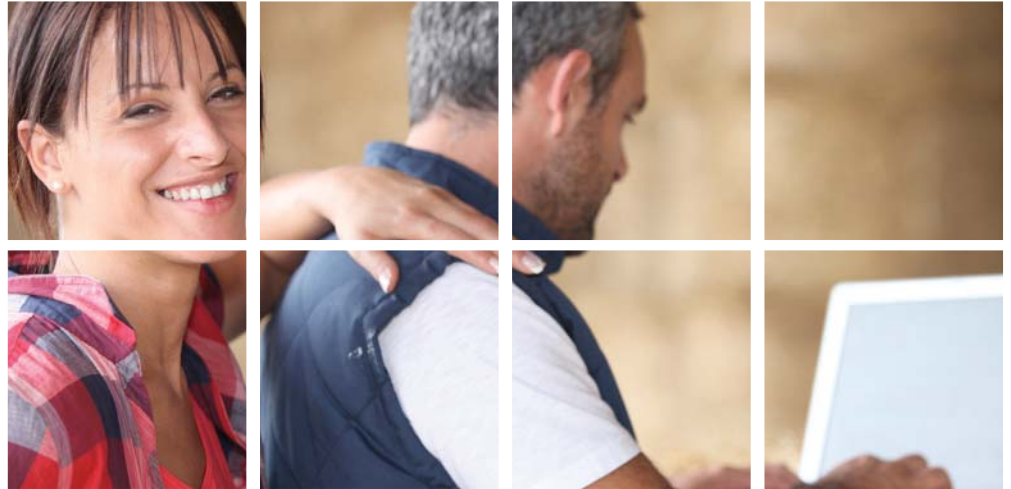

FARM MANAGEMENT
FROM YOUR PC

- Remote operation
- Clear overviews per barn and per farm
- Easy data exchange

F-CENTRAL FARMMANAGER™ MANAGEMENT SOFTWARE

F-Central FarmManager™ is Fancom's whole farm computer management software. F-Central FarmManager gives you instant access, day and night, to all the FANCOM® controllers on your farm. View, control and analyze all the operational processes from a central computer and remotely adjust controller settings as needed. The result is a perfect overview of the entire farm with no detail left to chance.

Features

- F-Central FarmManager automatically connects your FANCOM controllers to your PC enabling remote read out and control of these controllers.
- F-Central FarmManager stores all data from the controllers and presents it in data tables and graphs.
- Easily create your own overview screens with optional PlusData™ data management software.
- The system automatically backs up all settings entered in the farm's FANCOM controllers.
- The system enables the e-mailing of reports containing samples, calculated data and entry fields from all FANCOM controllers in a convenient summary form. The farmer can choose the information that is presented and the frequency for receiving the reports.

Advantages

- Remote operation saves time, lightens the daily workload and potentially improves farm biosecurity.
- Clear overviews of the barn or of the whole farm give insight for ways to reduce production costs and improve the technical results.
- Early identification of problems in pig development helps the farmer to efficiently manage their animals.
- Easy comparison of data and management of multiple barns.
- Collecting pig and barn environmental data enhances the farm's information exchange with business advisors, veterinarians and feed suppliers.
- Data can easily be exchanged with other FANCOM management programs.
