

eYeGrow[™]

WEIGHT MONITOR FOR FINISHERS

- A no-stress method of weighing of market hogs
- No extra labor input
- Improves your feed strategy for better feed profit
- Optimal delivery strategy for producing uniform-sized pigs

eYeGrow™ WEIGHT MONITOR

Do you ever wonder if your market hogs are growing enough? And can you predict the end weight early on? Or would you rather be surprised at the end? Opt for the continual safeguard provided by the Fancom eYeGrow™ Weight Monitor and get the best performance from your animals with maximum growth gains.

Time saving

The Fancom eYeGrow Weight Monitor is an automatic weight monitor for market hogs. A 3D camera installed at ceiling height over a section of pens continually monitors the animals so the computer can accurately calculate their weight. This is an automatic and stress-free process for the animals. Manual weighing causes stress which will be reflected by a growth dip. The eYeGrow Monitor prevents this growth dip and requires no additional labor input.

Save on feed costs

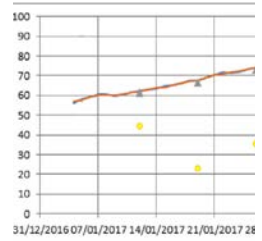

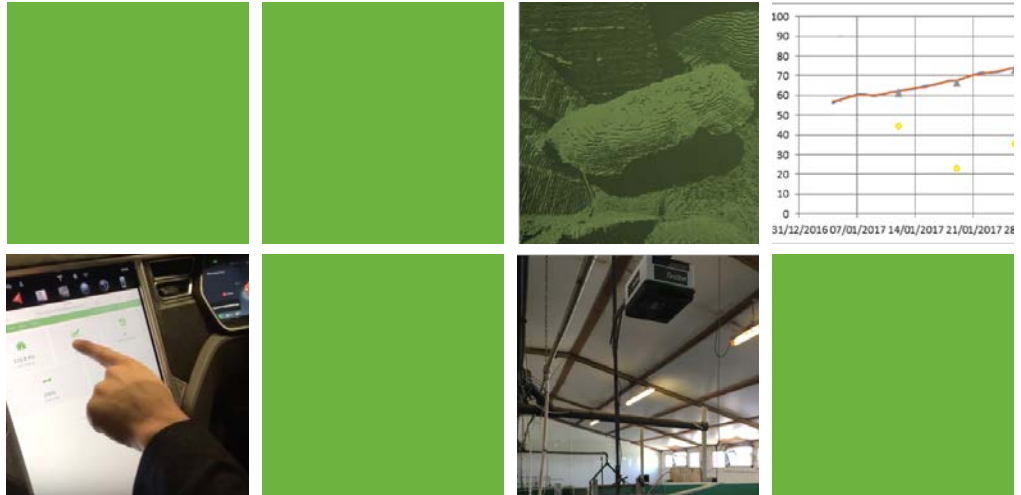

Fancom's eYeGrow Monitor allows the development of a group of market hogs to be followed from day to day. You can easily adapt your operational management to include an optimal feed strategy to help save feed costs while producing more uniform groups of pigs.

Improved delivery strategy

You can also predict the delivery weight and uniformity of the group far more accurately for better market results.

Insight into growth

The measurement data is stored in the cloud and important management information such as average weight, growth per day, number of measurements and uniformity is available 24/7 no matter where you are. The system can also be linked to Fancom's F-Central FarmManager™ Software.

Features

- More than 97% accuracy.
- Easy installation without calibration.
- Fits perfectly in existing houses.
- Does not take up space in the pen or affect the number of animals.
- Low maintenance.
- No additional lighting needed.
- Suitable for market hogs weighing more than 90 pounds (40kg).

Benefits

- Automatic weighing saves labor.
- Stress-free weighing prevents growth loss.
- Optimal feed strategy improves feed profit.
- Improved delivery strategy for producing uniform-sized pigs.
